

Claude, in one page

Give it context. Iterate out loud. Show it an example.

Give it context.

Who you are, what town, what it's for. Nine times out of ten a bad answer is a context problem.

Iterate out loud.

Don't accept the first draft and don't start over. Say what's wrong in plain words: "Shorter."

Show it an example.

Paste in a post that worked. Say "more like this." Showing what you want beats describing it.

EIGHT PROMPTS TO STEAL

1 Write a post, an email, or an ad

I own [BUSINESS], a [KIND] in [TOWN]. Write [THE THING]. Facts it can't guess: [DATES, PRICES]. Sound warm and plain. Under 80 words. Give me three versions.

2 Read a contract, lease, or policy

Explain this in plain English, like I'm not a lawyer. Then: what could cost me money, lock me in, or surprise me later? Quote the exact section.

3 Pull the dates and to-dos out of it

List every date, deadline, and thing I have to do in here, as a checklist, in the order they come due.

4 Make sense of a spreadsheet

This is every order my shop took this year. In plain English, what should I know?

5 Get a picture of it

Make me a bar chart of sales by month.

6 Answer a hard customer email

Draft a polite reply to this. Don't be defensive, don't over-apologize, and offer one concrete fix.

7 Write a job posting

Write a job posting for a [ROLE] at my [KIND OF BUSINESS] in [TOWN]. [HOURS, PAY RANGE, START DATE]. Sound like a real person, not HR.

8 Any time you're stuck

Give me three options, and tell me which one you'd pick and why.

WHERE THINGS LIVE

Attach a file

The **+** in the **lower-left corner** of the message box → **Add files or photos**. Not a paperclip, not at the top. Dragging a file in works too, and so does pasting.

Artifacts

Charts and documents open in a panel to the **right** of the chat; copy or download from its bottom-right corner. They all collect under **Artifacts** in the left sidebar.

Projects

claude.ai/projects → **+ New Project** (upper right) → fill in **Set project instructions**. Start chats **from inside the project**, or it won't know you.

The one setting

Settings > Capabilities → check **"Code execution and file creation"** is on. No charts without it. Company account: **Organization settings > Capabilities**.

WHEN IT GOES WRONG

- 1 Nothing useful came back.** Send it again, or say the same thing a different way.
- 2 Still off.** Add context: who you are, what town, who it's for, what you sound like.
- 3 Can't decide.** Ask for three options and pick one — then tell it what to fix.

STILL YOUR CALL

It can be wrong in a confident voice. **You're still the boss** — anything going to a customer, you read first.

You decide what you hand it. If a file is your most sensitive one, pick a different file.
